

Schema **dax-2.0.xsd**

schema location: **G:\GRIPHYN\PEGASUS\dax-2.0.xsd**
 targetNamespace: **http://pegasus.isi.edu/schema/DAX**

Elements Complex types Simple types
adag **FilenameType** **LinkageType**
PlainFilenameType **ProfileNamespace**
StdioType **TransferType**

element **adag**

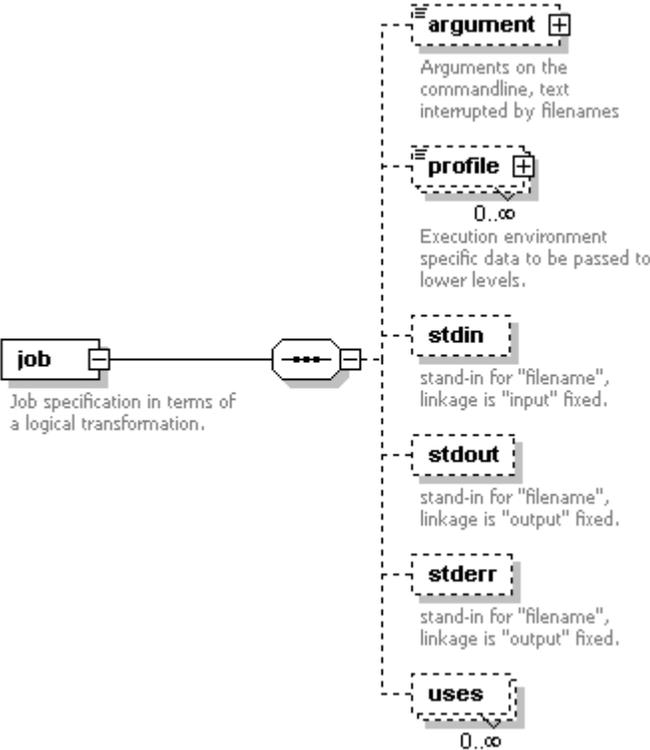

diagram	<p>The diagram illustrates the structure of the adag element. It is an abstract DAG in XML. It contains a job element, which is a job specification in terms of a logical transformation. The job element contains two sub-elements: filename (a list of all filenames used) and child (a list of dependencies). A note indicates that a dependency must not be used before all the jobs it references were declared, and it is suggested to keep all jobs, all deps, and all lfns together in a total of three sections.</p>					
namespace	http://pegasus.isi.edu/schema/DAX					
children	filename job child					
attributes	Name	Type	Use	Default	Fixed	Annotation
	version	xs:NMTOKEN	required			
	name	xs:string	required			
	index	xs:nonNegativeInteger	required			
	count	xs:nonNegativeInteger	required			
	jobCount	xs:positiveInteger	optional			
	fileCount	xs:nonNegativeInteger	optional			
	childCount	xs:nonNegativeInteger	optional			
annotation	documentation abstract DAG in XML					

element **adag/filename**

diagram	<p>The diagram shows the filename element, which is a list of all filenames used.</p>					
namespace	http://pegasus.isi.edu/schema/DAX					
type	extension of PlainFilenameType					
attributes	Name	Type	Use	Default	Fixed	Annotation
	file	xs:string	required			
	link	LinkageType	optional			
	optional	xs:boolean	optional	false		
annotation	documentation List of all filenames used.					

element **adag/job**

	link	LinkageType	optional			
	optional	xs:boolean	optional	false		
	type	xs:NMTOKENS	optional	data		
annotation	documentation logical filename representation.					

complexType **PlainFilenameType**

diagram						
namespace	http://pegasus.isi.edu/schema/DAX					
used by	elements adag/filename adag/job/argument/filename adag/job/profile/filename complexTypes FilenameType StdioType					
attributes	Name	Type	Use	Default	Fixed	Annotation
	file	xs:string	required			
annotation	documentation defines just a filename.					

complexType **StdioType**

diagram						
namespace	http://pegasus.isi.edu/schema/DAX					
type	extension of PlainFilenameType					
used by	elements adag/job/stderr adag/job/stdin adag/job/stdout					
attributes	Name	Type	Use	Default	Fixed	Annotation
	file	xs:string	required			
	varname	xs:NMTOKEN	required			
annotation	documentation Derivation of Plain filename, with added attributes for variable name recording.					

simpleType **LinkageType**

namespace	http://pegasus.isi.edu/schema/DAX
-----------	-----------------------------------

type	restriction of xs:NMTOKEN
used by	attributes adag/filename/@link adag/job/stdin/@link adag/job/stdout/@link adag/job/stderr/@link FilenameType/@link
facets	enumeration none enumeration input enumeration output enumeration inout
annotation	documentation defines the usage of a logical filename.

simpleType **ProfileNamespace**

namespace	http://pegasus.isi.edu/schema/DAX
type	restriction of xs:NMTOKEN
used by	attribute adag/job/profile/@namespace
facets	enumeration pegasus enumeration condor enumeration dagman enumeration env enumeration hints enumeration globus enumeration selector
annotation	documentation defines the legal namespaces of execution profiles.

simpleType **TransferType**

namespace	http://pegasus.isi.edu/schema/DAX
type	restriction of xs:NMTOKEN
used by	attribute FilenameType/@dontTransfer
facets	enumeration false enumeration optional enumeration true
annotation	documentation defines the tri-state transfer modes.
